

# Weekly Report

06/11/2016-13/11/2016

Han Dongming Nov. 13 2016

## Work

1. Do the organization revolution of the Hua Wei project

2. Discuss with Dr.Guo about the paper and following work

## To do

1. Finish the Hua Wei project
2. Learn AngluarJS to do the following paper

## Felling

I want to share my experience during the Hua Wei project with others who are looking my weekly Report.

The first thing is “NOTE”. Do it when you code is really important. Sometime you will think it's so easy that you don't need the note to remind yourself, but with the increase of work and codes you will find there are many segments you don't know their means, another reason is that other people take over your job, the node is a really great way to

describe your thought for them.

The second thing is "Not Optimize". Optimize will take you lots of time and because of blur demand you will not need the function. Do it when it's really necessary.

The third thing is "Plan". Make plan to manage your work and study. Finish it on time will make you excited and happy. And you will not feel nervous before the DDL.
